What is Blockchain ?

Blockchain is a system of recording information in a way that make difficult or impossible to change, hack, or cheat the system. A blockchain is essentially a digital ledger of transactions that is duplicated and distributed across the entire network of computer systems on the blockchain. Each block in the chain contains a number of transactions, and every time a new transaction occurs on the blockchain, a record of that transaction is added to every participant's ledger. The decentralized database managed by multiple participants is known as Distributed Ledger Technology. Blockchain is a type of DLT in which transactions are recorded with an immutable cryptographic signature.

Crypto-Currency Mining

Crypto-Currency mining is the process of creating new crypto by solving extremely complicated math problems that verify transactions in the currency. When a crypto-currency is successfully mined, the miner receives a predetermined amount of crypto.

By mining, you can earn cryptocurrency without having to put down money for it. Bitcoin miners receive bitcoin as a reward for completing "blocks" of verified transactions, which are added to the blockchain.
